Virtual Curb Ramp Assessment from Lidar Data

Ezra Che, Yang Zhou, Michael Olsen, Yelda Turkan Oregon State University

Disclaimer

- Drs. Olsen and Che have financial interests in the company EZDataMD LLC, a tech transfer company spun out from OSU. The conduct, outcomes, or reporting of this research could benefit EZDataMD LLC and could potentially benefit us.
- Tech Transfer of Geomatics Research at OSU
 - Exclusive IPs for point cloud processing:
 - **RoME**: road marking extraction and evaluation
 - Vo-Norvana: point cloud segmentation
 - **Vo-SmoG**: ground filtering
 - **EZPC**: point cloud data management toolkit
 - **EZVox**: point cloud data processing toolkit
 - **EZFeat:** feature extraction toolkit
 - **RAMBO**: slope stability/terrain modeling/change analysis
 - And MANY MORE!
- Provides a wide range of services
 Licensing software
 Consulting services
 Custom development

Smart Level vs Lidar

- Smart Level
 - Easy to operate
 - High Accuracy (0.2%, 1-sigma)
 - Current standard
- Lidar
 - High Accuracy (sub-cm)
 - High resolution (cm)
 - Surrounding environment

- Workflow for slope measurement using lidar:
 - Consider context of ADA compliance assessment.
 - Align with field equipment and procedure
 - Minimize user intervention
 - Consider surface roughness

Data Preparation

- Crop the point cloud
- Define ramp orientation

Point cloud data after rotation

6

DEM & Sampling

- Generate DEM
- Define sampling locations

Y

Slope measurement

- Surface Normal (SN)
- Linear Regression (INLR)
 - Immediate
 neighbor used
 - Sensitive to noise
 - Do not match smart level's measuring scale (length).

Slope measurement (cont.)

- Scaled Neighbor Linear Regression (SNLR)
 - Match the size of a smart level (0.6 m, 2 ft)
 - Still assume the surface to be smooth.

Touching Point

- Criteria:
 - There is one touching point on each half of the virtual smart level.
 - The entire virtual device is above the ground (DEM).
- Advantages:
 - Considering both the measuring scale and surface roughness.

Oregon State University

College of Engineering

Testing Dataset

- Slope metrics
 - Mean Slope: general trend of the ramp surface.
 - Slope Std. Dev.: roughness of the ramp surface.
 - Maximum Slope: current standard for assessment.

Accuracy Assessment

Optimzied Cell Size = 0.03 m (matches the width of a smart level!)

	SN	0.65%		SN	1.70%		SN	4.29%
RMSE of mean	INLR	0.68%	RMSE of surface	INLR	1.82%	RMSE of	INLR	4.38%
slope	SNLR	0.19%	roughness	SNLR	0.18%	maximum slope	SNLR	0.42%
	ТР	0.18%		ТР	0.14%		ТР	0.32%

 - Number of samples

Conclusion

- Accuracy
 - Mean slope: 0.18%
 - Roughness: 0.14%
 - Max slope: 0.32%
 - Smart Level: 0.2%
- Consistency
 - Inspectors: 0.5% (max slope)
- Flexibility
 - Adjustable sampling distance
- Efficiency
 - Save field time

Characteristic	ODOT standard
Running slope	5.0% to 7.5%
Cross slope	1.5% maximum
Counter slope	4.0% maximum
Clear width	54 in (1.4 m), 66 in (1.7 m) (island)
Flares	10% maximum
Landing slope	1.50%
Landing dimension	54 in (1.4 m)
Gutter cross slope	1.50%
Turning space	54 in or 1.4 m minimum and 66 in
	or 1.7 m minimum when the back
	is constrained, 1.5% maximum
	slope

Test results obtained with the proposed approaches for the 0% slope curb ramp (cell size: 0.03 m).

Nominal Slope: 0%									
Method	Ramp ID	Slope Metrics (% slope)							
		# of samples	mean	std	min	max	median		
SN	А	19	1.41%	1.15%	0.08%	3.94%	1.11%		
	В	17	1.52%	1.21%	0.06%	3.42%	1.08%		
INLR	А	19	1.51%	1.41%	0.00%	4.33%	1.00%		
	В	20	1.54%	1.17%	0.17%	3.58%	1.21%		
SNLR	А	8	0.44%	0.40%	0.01%	1.33%	0.33%		
	В	12	0.63%	0.63%	0.09%	1.88%	0.43%		
ТР	А	8	0.45%	0.26%	0.06%	0.94%	0.41%		
	В	12	0.55%	0.62%	0.01%	1.89%	0.29%		
Smart level	А	9	0.56%	0.43%	0.05%	0.15%	0.55%		
	В	9	0 58%	0.67%	0 10%	1 95%	0 30%		

16

Difference values (Δ) between the different approaches and smart level on the ramps with a nominal slope of 0% (cell size: 0.03 m).

Nominal Slope: 0%								
		D (% slope)						
Method	Ramp ID	mean	std	min	max	median		
	A	0.85%	0.72%	0.03%	3.80%	0.56%		
SN	В	0 94%	0 54%	-0.04%	1 47%	0 78%		
	٨	0.95%	0.98%	-0.05%	/ 19%	0.45%		
	P	0.95%	0.50%	-0.0376	4.1370	0.45%		
INLK	В	0.96%	0.50%	0.07%	1.63%	0.91%		
	A	-0.12%	-0.03%	-0.04%	1.19%	-0.22%
