**Advanced Border Information  
System (ABIS)**

# POTENTIAL BWT SENSOR TECHNOLOGIES

## WIFI and Bluetooth

## LIDAR & RADAR

## In-Pavement Sensors

## Video Analytics

## RFID

## CASE STUDY EXAMPLE: Southern Border Crossing Information

Key:

- RFID Reader
- WiFi Reader
- Bluetooth Reader
- Precision LiDAR Volume Counter

## TODAY'S SOA

Approaches with multiple technologies integrated together, and supported by software infused with AI represent the emerging trend in BWT system design

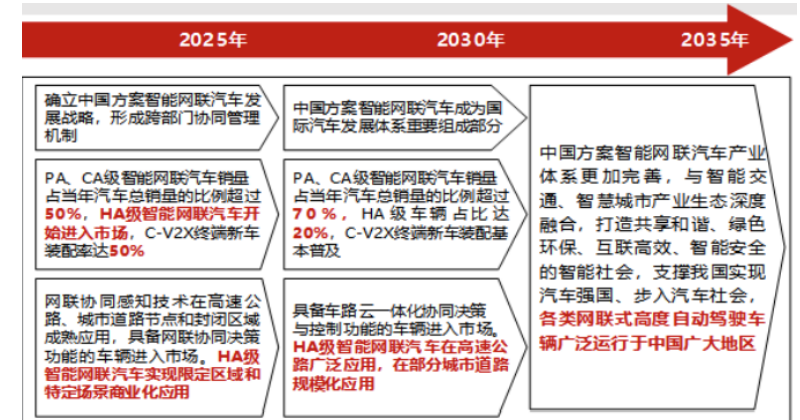

## TRENDS

- Cloud migration vs on-premise hosting of data and processes
- Location based (GPS) and App based BWT measurements
- Use of AI, ML and PoE/Agency specific automated analytics, dashboards and reports

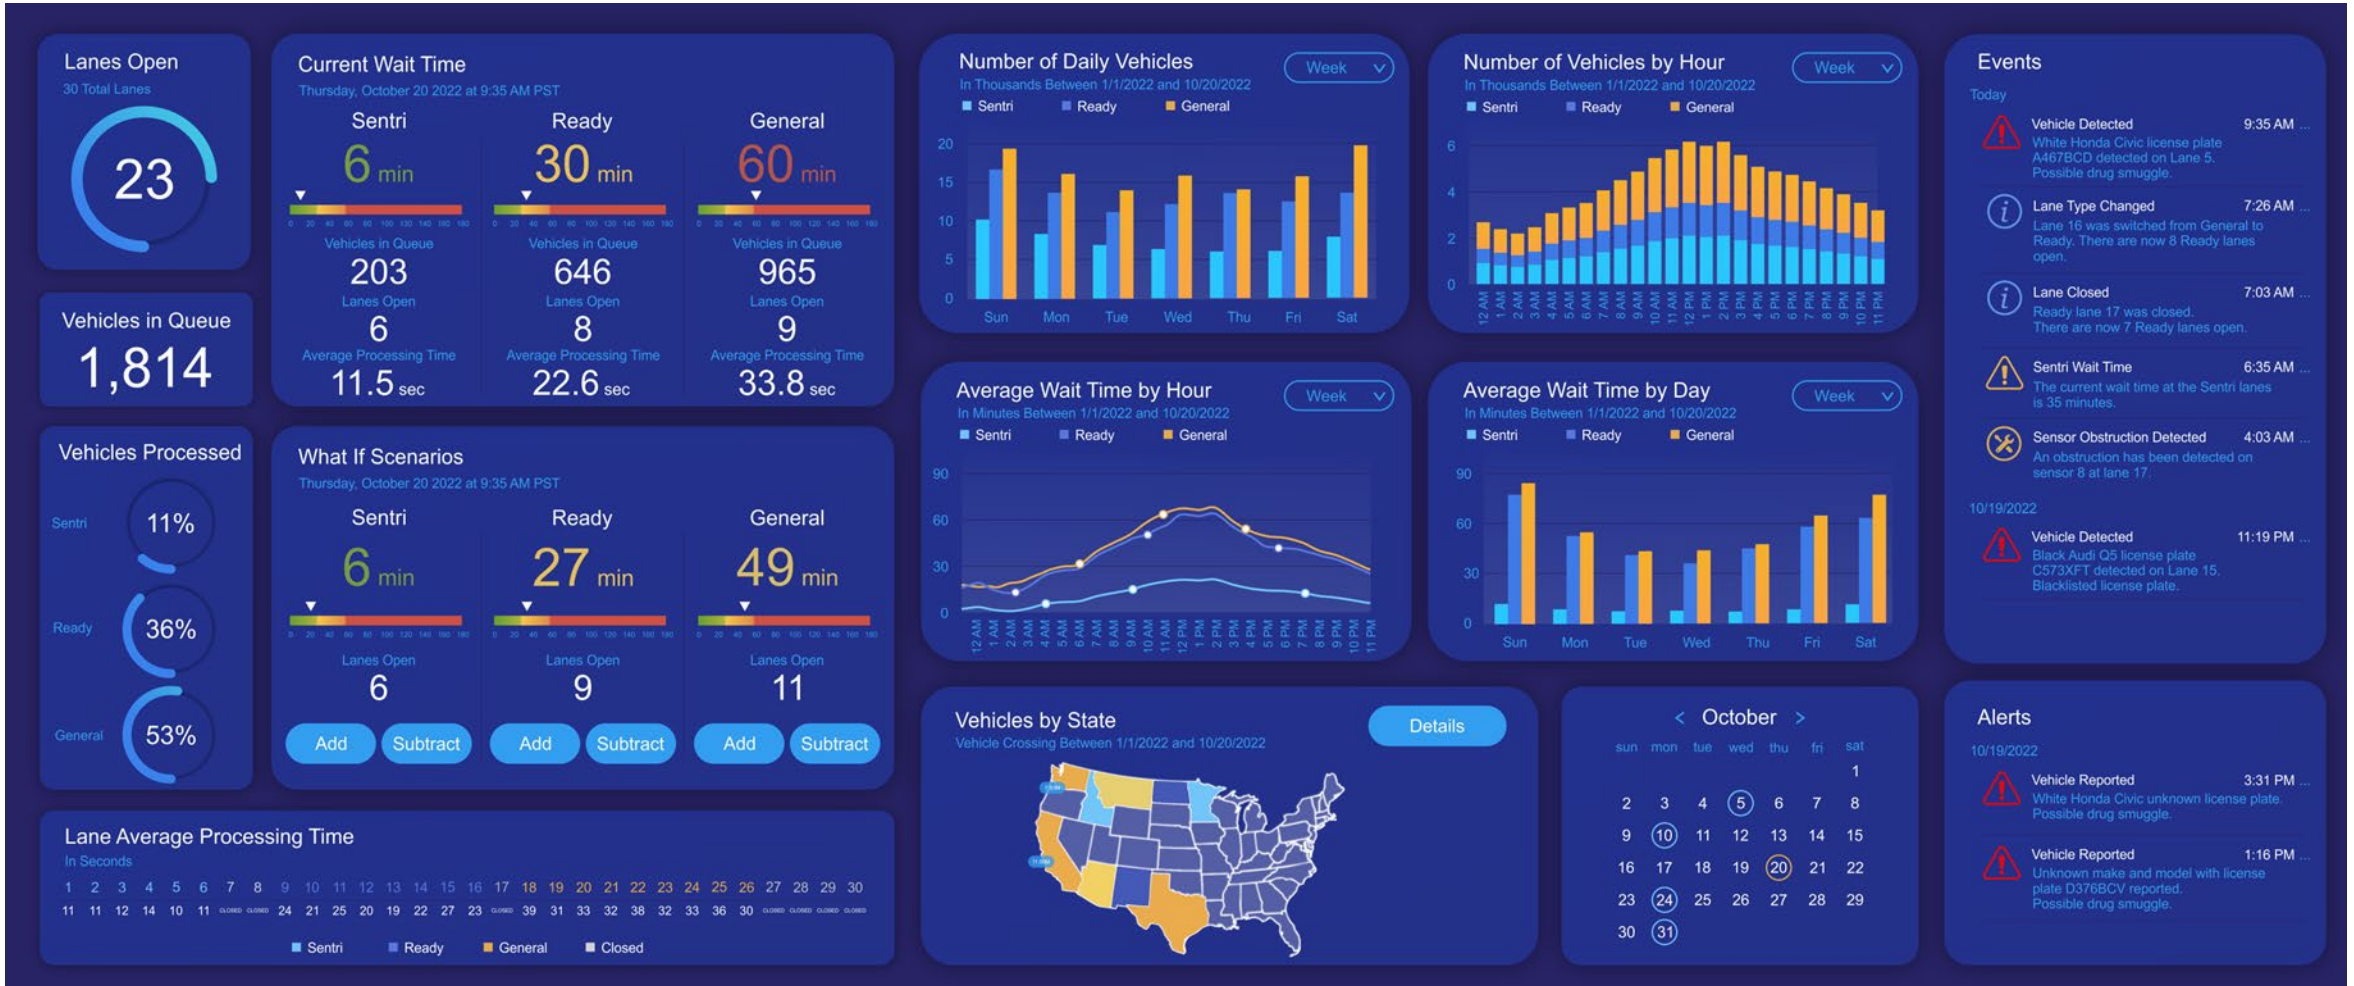

## 5 -10 YEARS OUT

### ADVANTAGES OF GPS BLOCK III

- Enhanced cybersecurity
- Improved accuracy
- Longer lifespan
- Increased capacity
- Interoperability
- Improved signal in difficult environments

# CONCEPTUAL BWT FUTURE DASHBOARD

# **I-10 Corridor Coalition**

## **Truck Parking Availability System (TPAS)**

Goals	Objectives
Reduce fatigue-related truck-involved crashes in the I-10 Corridor.	The I-10 Corridor Coalition TPAS will enable commercial vehicle drivers to readily identify parking spaces and reduce the chances of operating while fatigued.
Reduce emissions associated with excess driving while searching for parking.	The I-10 Corridor Coalition TPAS will enable commercial vehicle drivers to readily identify parking spaces and reduce travel searching for parking.
Reduce public infrastructure degradation from vehicles parking in unauthorized locations.	The I-10 Corridor Coalition TPAS will enable commercial vehicle drivers to readily identify parking spaces and reduce parking along highway shoulders, ramps or other unauthorized locations.
Increase driver efficiency by reducing time spent looking for parking	The I-10 Corridor Coalition TPAS will reduce the amount of time spent looking for parking, which will increase the time traveled towards a destination.
Create a standardized information technology system that can be expanded in future deployments to serve other corridors within the four states, other states along I-10, and/or other ITS needs in the I-10 Corridor.	The I-10 Corridor Coalition TPAS will create a system that can be expanded elsewhere in the member states, possibly expanded to adjacent states, and could be leveraged to deliver other truck-related information such as forecasted truck availability or weather advisories.

## Truck Parking Project for I-5 in Oregon

In what's being called a move to provide safer, easier truck parking along I-5, Oregon, Washington and California received \$12.3 million in federal grant funds for their joint Regional Truck Parking Information Management System project. The project will deploy a real-time truck parking information system at 54 truck parking areas along I-5 through all three states. The system will use sensors and cameras in truck parking areas to collect data and feed that information to truckers in real time.

### Categories

Select Category

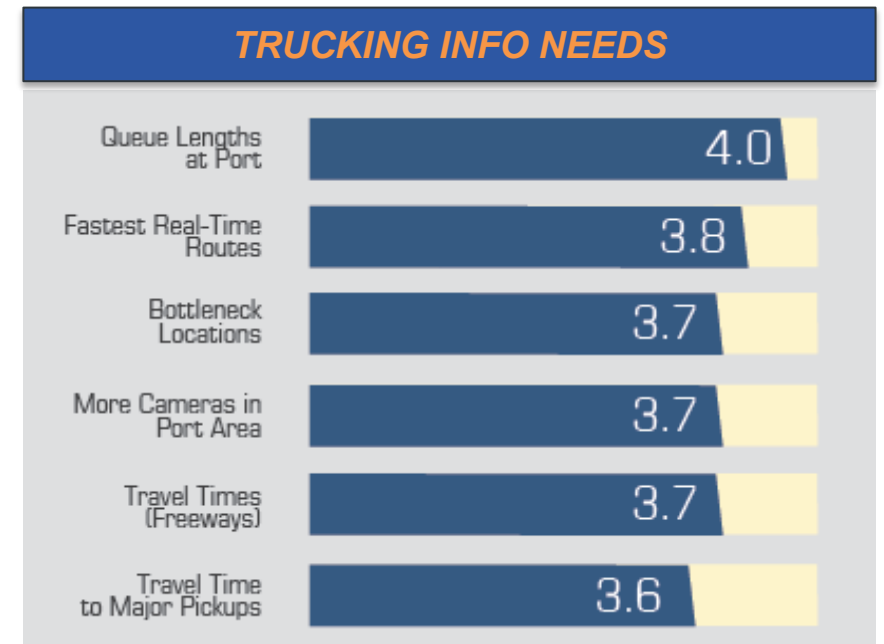

# **LA Metro DrayFLEX**

## **Freight Optimization**

# Background: Gateway Cities Logistics Corridor

- **Anchored by Ports of Long Beach & Los Angeles**
  - Busiest port complex in North America
  - Over 1000 Trucking Companies
  - Includes 14 Active Marine Terminals
  - 694 Million sqft. of regional warehousing space
- **Robust transportation network**
  - I-710, I-5, I-405, I-605, I-105, SR-91; vast arterial network of over 2300 signalized intersections
- **Major Issues in Goods Movement Efficiency**

- Lack of information sharing between trucking and terminals impedes freight system efficiency
- Lack of freight-specific traveler information such as terminal wait times and dynamic routing options

## **OPERATIONS CONERN:**

During COVID, 50+ ships were sometimes waiting to get a cargo berth at the ports

# ATCMTD GRANT

## FReight Advanced Traveler Information System (FRATIS)

ATCMTD Benefit	Anticipated Benefits
<b>Mobility</b>	FRATIS would drive overall goods movement efficiencies for the private sector through shorter turn times, improved travel times to distribution centers achieving benefits of 15 percent savings in vehicle miles of travel (VMT), travel times, and 21 percent savings in fuel.
<b>Safety</b> (non-quantifiable)	By reducing congestion and increasing reliability, FRATIS will enhance safety by lowering the number of primary and secondary incidents.
<b>Environment</b>	FRATIS will reduce CO <sub>2</sub> , NO <sub>x</sub> and SO <sub>x</sub> , V <sub>o</sub> C and CO by and between 21 and 23 percent each, and PM <sub>10</sub> by 27 percent.

**ATCMTD GRANT APPLICATION**

**FREIGHT ADVANCED TRAVELER INFORMATION SYSTEM (FRATIS) PROJECT**

DATE: June 3, 2016

SUBMITTED TO: U.S. Department of Transportation – Federal Highway Administration

BY: Los Angeles County Metropolitan Transportation Authority

Advanced Transportation and Congestion Management Technologies Deployment (ATCMTD) Initiative

Applicant: Los Angeles Metropolitan Transportation Authority (Metro)  
Type of Eligible Applicant: Regional Transportation Planning Agency/Transit Agency  
ATCMTD Grant Request: \$3,000,000  
Location: Los Angeles County, California  
Congressional Districts: 44<sup>th</sup> – Janice Hahn, 47<sup>th</sup> – Alan Lowenthal  
NOFD Number: DTFH616RA00012

# DRAYFLEX CORE APPLICATION VISION

- Real-time data integration (TM TOS, appointments)
- Route optimization based on real-time data
- Leverage regional traveler information data
- Ability to integrate CV/AERIS
- API-based open architecture

STEPS NAVIGATE

# DRAYFLEX PERFORMANCE METRICS

Overarching Goal	Description/Hypothesis	Primary/Key Performance Indicators	
		Core	Trip
<b>Mobility</b>	DrayFLEX will <u>improve mobility and reduce congestion</u> for the trucking community through optimization of truck planning and dispatching (Core) and improved truck routing capabilities (Trip).	<ul style="list-style-type: none"> <li>•Turns per truck per day</li> <li>•VMT per move (or turn)</li> <li>•Perceived congestion improvement</li> </ul>	<ul style="list-style-type: none"> <li>•Travel time</li> <li>•Perceived trip time improvement</li> <li>•Perceived congestion improvement</li> </ul>
<b>Safety</b>	The DrayFLEX project will <u>improve safety</u> by providing information to the driver on traffic conditions (Trip).	•N/A	<ul style="list-style-type: none"> <li>•Number of dangerous slow-down notifications</li> <li>•Perceived safety</li> </ul>
<b>Environment</b>	Reduced congestion, bobtails, queues, and idling from the DrayFLEX project will <u>result in environmental benefits, including reduced emissions and fuel use</u> (Core and Trip).	<ul style="list-style-type: none"> <li>•Emissions/GHG</li> <li>•Fuel use</li> </ul>	<ul style="list-style-type: none"> <li>•Emissions/GHG</li> <li>•Fuel use</li> </ul>
<b>Operational Efficiency</b>	DrayFLEX will <u>improve system performance and operations</u> for trucking companies through improved technology and systems	•Perceived system effectiveness	•Perceived system effectiveness
<b>Economic Benefit/Cost Savings</b>	DrayFLEX will <u>reduce costs and improve return on investments</u> for the project stakeholders (MTOs and truck operators) through improved fleet planning and dispatching, and shorter turn times (Core); and improved travel times and fuel savings (Trip).	<ul style="list-style-type: none"> <li>•Number of dual transactions</li> <li>•Number of transactions</li> <li>•Moves per driver per shift</li> </ul>	•Fuel savings
<b>Traveler Information</b>	Traveler information from DrayFLEX will <u>provide truckers with easier access to improved information for trip planning</u> (Core) and <u>en-route alerts and notifications</u> (Trip).	•Perceived customer satisfaction	•Perceived customer satisfaction
